

# Strengthening ESG Data, Decarbonization & Reporting

## Who We Are

Mindtrust is a sustainability consultancy supporting **multinational corporations and diversified groups across Asia**. As internationally **certified carbon accountants**, we deliver **audit-ready ESG reports and strategic decarbonization roadmaps**. We understand the expectations of global brands and ensure our work aligns with their sustainability ambitions and their reputation with international stakeholders.

## The Challenges

- **Evolving Standards:** HKEX ESG Guide now references ISSB/IFRS S1 & S2, raising expectations for traceable, high-quality ESG data.
- **Complex Operations:** Multiple business units, fleets, facilities, and suppliers create fragmented, inconsistent data.
- **Scope 3 Pressure:** Customers and investors demand visibility across supply chain emissions and circularity impacts.
- **Manual Processes:** Excel-based workflows slow reporting and increase risk of error

## Our Solution

We modernize ESG data management and emissions workflows across complex organizations:

- **HKEX-compliant ESG reporting**, delivered end-to-end.
- **ISSB-aligned tools** and proprietary workflows built on IFRS S1 & S2

- **Centralized ESG Platform:** Consolidate energy, fleet, waste, supplier, and procurement data.
- **Automated Scope 1–3 Calculations:** Aligned with GHG Protocol, PCAF, and IFRS S2.
- **Disclosure-Ready:** Generate investor-grade ESG reports for HKEX and global client requirements.
- **Real-Time Dashboards:** Track emissions, performance, and targets across regions and business units.

Delivered through **best-in-class sustainability tools**, ensuring accuracy, and audit readiness.
